Gents ...

Several months ago I picked up in the wind a rumor that Rick Mish (Miltronics) was acquiring and restoring a small number of R-390's (non-A). I acquired one of Rick's R-390A's (1967 EAC) a few years ago, and have been immensely happy with it, so I looked into the R-390 possibility.

One thing led to another and a couple of weeks ago my "new" Collins R390 arrived, fully reconditioned, beautifully renovated, and operating flawlessly. Like the R-390A renovated by Rick, an appliance radio in the finest sense of the word.

This is really just an unsolicited plug ... in the event you happen to come across a well cared for A or non-A done by Rick, it would be hard to go wrong. These aren't your hamfest variety radios. And of course, they aren't priced that way either ... but IMHO you get your money's worth and then some.

This is the off-topic part ... just acquired a Galaxy R-530 (ca. 1970, sand-state, Wadley loop, NICE radio!) and would like to communicate (off the list, please) with anyone else who has one.

Hi to all

Try going to an Industrial Electrical Supply house. (Not your favorite hardware store)

There you will find all sorts of industrial grade bracketry that is used by professional electricians to support equipment, cable runs, and other assorted items.

Well, I use a Waterman PocketScope 3 incher to do something like that!
It's the smallest BA scope I know of. Anything smaller out there? To be
fair, it must be a bona fide o'scope, with sweep & X and Y amps.

I've researched & written on use of stereo vs. monaural subwoofers. To
help me along, I've got the tiny scope connected to the left & right
subwoofer outputs (low pass filtered at about 35 Hz) via its X & Y inputs.
It's so small it fits what space I've got.

As it's looking at only rather low freq (subsonic) audio stuff, the display
often makes sense in terms of inter-channel phase & frequency.

Alas, this one has no silver solder in it, so...

Content-Type: TEXT/PLAIN; charset=US-ASCII

Good news/bad news:

The 100V is about to make its debut on the air. Tonight I located a
Dow-Key coax relay and hooked that up. My previous "gravelly" problems
in the VFO drive have disappeared with the application of some "TRI-FLOW"
to the front of the ass'y. But I have a question relating to that:

The VFO now tunes smoothly, but after I leave it set for a few minutes, it is like it creates its own "detent". If I then rock the dial back and forth I can feel where it had been stopped. IS this normal or should I pursue the lube situation further?

Finally, 3 of the bands are dead on frequency-wise, but 40 meters is 5.5 KC low and 20 meters is 4 KC low. (The VFO is right on). No amount of tweaking either the trimmers or coils will bring it on freq. So I think I am facing having to buy a couple of new xtals. Any comments from you experts on that?

Finally - does anyone have a 100V with 160 meters in it? Any thoughts on adding it?

Hi all,

I'm looking for one or two of the 3 pin female mains connectors used on older HP equipment. These have 3 pins in a shallow triangle configuration (almost in line). I suppose they went over to IEC connectors in the 1970s

I have a couple of NOS manuals for the Boonton 260A Q meter to exchange if anyone is interested.

If you don't have any luck getting cords from our esteemed compatriots,
Newark Electronics carries them in the Belden brand.

Good luck looking. 73.

Content-Type: text/plain; charset=us-ascii
Content-Transfer-Encoding: 7bit

Hi, gang,

What a needle-in-the-haystack THIS is...

I need Heath p/n's 60-26 and 60-27. These are the slide switches from the GR-43A Heath/Zenith "Trans-O 1000" clone. I've got a nice one to restore (works okay), but the only thing missing are both these long-handle switches. One is SPDT for a "power-saving" feature and the other a spring-return SPST which turns on the dial light.

Any possibility that one of you might have either of these in the ol' Junque Boxx?

I'd like to announce to those who thought I'd vanished....I'm back!
We had a lightning strike July and it took out my modem and the
serial port on the mother board! Not to mention the new 900 Mhz
portable telephone!

If anyone sent me e-mail I have not answered, please re-send it!
I'm sorry to have dropped out of sight this way! To add to the misery,
a local computer clown, who I thought I could rely on, promised me a
new machine (AMD K6-2/500) but to date, I have not been able to
make it function with the modem he promised and said was working!

Only due to the kindness of a reflector member, I'm online today!
Some day this year, I hope to have the "high powered" computer going....!!

73,

Sandy W5TVW

Within 24 hours I had several replies which included:

- the names of suppliers together with catalogue information
- offers to send a spare cable gratis
- an invitation from a list member I've met in person in the past to swap a cable for a beer next time I'm in the USA

and amazingly,

- a message from a member who was looking for a Boonton 260A manual in exchange for couple of cables!!!

Many have said it before, and I'll say it again - this is the most knowledgeable, witty, friendly and generous group of people I have ever met in my 30 odd years in the hobby. It's a real pleasure to belong to this list.

73 to you all

K3DZ just sent me the following - figured the list would get a good laugh from it - you will no doubt see yourself in many, if not most of the observations!

Chris, AJ1G
Stonington, CT
radiobwn@ricconnect.com

YOU JUST MIGHT BE A RF ENGINEER:

If you give people directions with radio towers for landmarks.

If your automobile has more antennas than a Channel 5 News Van.

If you think your bedroom would look nice with some Smith Chart wallpaper.

If you want a vector network analyzer for Christmas.

If you see a metal coffee can and think, I can make an orthogonal multi-mode antenna feed-horn from that.

If your idea of DC is anything below 100 MHz.

If you know the frequency of all the garage door openers in your neighborhood.

If you see a lady with large ornamental earrings and wonder what the gain of them would be if used as an antenna.

If your idea of an ideal vacation is a visit to a radio telescope facility.

If you've ever built a resonant cavity filter out of Pepsi cans.

If you still own a slide rule and you know how to work it.

If you have at least four different kinds of coaxial cable in your workshop.

If someone asks you to measure something and you give them results in wavelengths.

If you can remember 7 computer passwords but not your anniversary, (or ANY of your wife's clothing sizes).

If you'd rather talk about I/Q modulation techniques rather than sports.

If you've visited ALL of the broadcast transmitter facilities within 75 miles of your house.

If you think towers are esthetically pleasing.

If your wife asks how much more or less something is and you give her an answer in dB's.

If your automobile buying decisions are heavily influenced by how much space there is to mount radios and antennas.

If you couldn't sleep until you found out all the details of the Mars Rover communications system.

If you view a tree as a place to mount antennas.

If you have a dog named Klystron.

Hell and Damn!! When I saw RU I thought it was about an old Navy receiver. Uhhh...guilty on several counts by the way.

Time to pay more bills, so up go some other bits of junk I do not need:

More tubes!

Once again, the pile of untested boatanchor tubes is starting to overflow. As some of you know from previous offers, the piles are untested, but all of the tubes must be cool enough to show up in Tube Lore. Essentially that means that the useless TV types are gone (actually, they are growing in another box, if anyone needs them. <short pause> I didn't think so.). No stupid voltages - just useful 6 and 12 volt stuff like 6AU6s, 6BA6s, 6BH6s, 6C4s, 6J6s, 12SK7, 12SQ7, etc.. Maybe even a few voltage regulators and battery tubes as well this time. As you would expect from a lot of untested tubes, most will actually still be quite good! Obvious dead tubes are pitched before they go into the piles.

Here are the piles:

A: (50) 7 and 9 pin minis
B: (50) 7 and 9 pin minis
C: (30) octals, metals and various glass bulbs.
D: (30) octals, metals and various glass bulbs.

Each pile is \$20 - and that includes shipping in the U.S. I will ship elsewhere, but contact me about rates. I know some of the far-off BA members have a hard time finding US tubes.

First come first served. Pick a pile or two!

I have to side with Ed. Funny list, but I feel so empty seeing that a
chance for an RU-1 was just an illusion. Sigh...

Here is lot E:

(10) Mercury rectifiers, 866s, 872s, various bulbs and makers (including
oldies).

'Bet you didn't see this one coming...

Same price - \$20, includes the shipping.
